1. Applicants' election of Species D-4 (the gel being produced from a solution of at least one synthetic polymer, the synthetic polymer comprising poly (acrylic acid)) in response to the previous Office Action is acknowledged. Claims 3-8 are withdrawn from further consideration as being drawn to non-elected species. The non-elected species recited in claims 2 and 9 are withdrawn from further consideration as well. Because Applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. The continuity data at the beginning of the specification needs to be updated to reflect that the parent application to the instant application has issued as U.S. Pat. No. 6,365,082.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Thary (U.S. Pat. No. 5,112,543).

Art Unit: 1722

Thary disclose a molding structure defining a preselected shape so that a flowable polyurethane composition may be formed into the preselected shape via contact with the mold (cl. 1, ll. 54-63). The mold comprises a polymer gel body as part of the shape forming structure (cl. 1, ll. 63-66; cl. 2, ll. 11-20; cl. 3, ll. 16-34). The polymer gel may comprise polyacrylic acid (cl. 4, ll. 3-33) and thus, a synthetic polymer.

5. Claims 1, 10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Tobin (U.S. Pat. No. 5,906,781; previously of record).

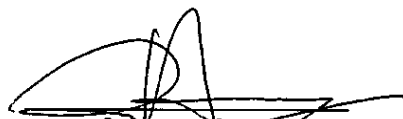

Tobin discloses a mold comprising a polymer gel body (7) which defines a preselected shape so that a flowable plaster or ceramic composition (9) may be formed into a preselected shape via contact with the mold (see fig. 4). The polymer gel body may comprise fibers or other structural material dispersed in the gel as a reinforcement material (cl. 5, ll. 36-40).
